

Criminology

The terrorists are planning an attack on one of the nation's secure facilities. We need to stop the attack. Our field agents have reported that the terrorists have activated several sleeper cells. We are sending you what information we have now. Your task will be to identify who the terrorists are.

As soon as you are certain you have accurate information for the DDD you can send that information by using the following web form:

DDD

Make sure your answers are correct as the form can only be completed one time.

Terrorist Watch List

You are being sent our terrorist watch list. There are a lot of people on it, but you should be able to quickly narrow down some suspects. The breach to our secure facilities access codes could only be achieved by someone with skill in computer hacking. You might want to start by looking at occupations, education and skills for individuals that show significant training or high proficiencies in computer programming or computer security systems.

The list may be one of your best resources as it contains a lot of information about each person on the list. We have agents in the field intercepting messages that might give us some clues to the members of the group. You might be able to locate the individual members of the terrorist group by looking at their skills or occupations. If you find one member of the group, you should be able to find some of their associates.

Words

One of our agents has infiltrated the group but they can't easily communicate without blowing their cover. They sent us a dictionary and in a separate message and this list of words as a puzzle. We think solving the puzzle will lead to further information and may help identify the terrorists.

Each set of three words have something in common. We suggest you find the word they have in common and then look it up in the dictionary.

Words

1. Hair, Brain, Ocean
2. Scale, Tire, Checkbook
3. Balloon, Cavity, Prescription
4. Home, Dinner, License
5. Corn, Baby, Motor
