

# Research

The terrorists are planning an attack on one of the nation's secure facilities. We need to stop the attack. Our field agents have reported that the terrorists have activated several sleeper cells. We are sending you what information we have now. Your task will be research information that we don't understand. We've received some messages from our field agents that we don't know how it fits into the investigation. The messages come in the form of a puzzle to make them more secure and to help the agents keep their cover. We need you to solve the puzzles, so we can gain access to the information the agents are trying to send us.

As soon as you are certain you have accurate information for the DDD you can send that information by using the following web form:

Make sure your answers are correct as the form can only be completed one time.

Some of our field agents have sent in additional information. To protect their identity, they have put the information on secure websites. You will need a password to access the website. You can find the password by solving a riddle or puzzle that they sent with the link.

Your assignment will be to try and help find the weapon the terrorists are planning to use and the type of facility they plan to attack. You may find other clues that will help your team.

Agent Farmer sent a riddle. We believe the answer to this riddle is the password to his secure website.

**What three whole numbers' sum also equals  
the product of those same three numbers?  
Write them in order from least to greatest.**
